### Legend

ND: Not Detected. Indicates that the analyte was "Not Detected" by the analysis conducted with the specified method or "< LOD" if indicated.

11C = In accordance with the official test method, the result must be understood as an absolute value.

U: Expanded uncertainty, expressed in the same units as the result, calculated using a coverage factor K=2 (unless otherwise specified) to ensure a level of confidence close to 95%; or, for microbiological tests and tests for airborne asbestos fibres, a confidence interval at the 95% probability level. For microbiological tests, a result derived from a count on the sample, initial suspension, or first dilution between 4 and 9 (inclusive) is considered "estimated." Foods: For quantitative microbiological tests, the expanded measurement uncertainty is reported, estimated according to ISO 19036 as the standard uncertainty multiplied by a coverage factor k=2 and an approximate level of confidence of 95%. The combined standard uncertainty is assumed to be equal to the standard deviation for within-laboratory reproducibility. Water: For quantitative microbiological tests, the confidence interval of the result calculated according to ISO 8199 is reported.

LOD: Limit of detection, defined as the lowest concentration of the analyte in a sample that can be detected, but not quantified, under the specified conditions; expressed in the test report as "ND". LOQ: Limit of quantification, the lowest concentration of the analyte in a sample that can be determined with acceptable precision and accuracy. R%: Mean percent recovery; any application in the calculation of the result is indicated via a specific note associated with the test.

En: Revision "n" of the Test Report that identifies the Amendment. The Amendment replaces and cancels all previous versions of the RdP.
